NO SODIUM

NO CALORIES

DIRECTIONS: Shake well before each use. As a dietary supplement, take 1/2 Cap (15 ml) of L-carnitine 1-3 times daily or as directed by physician or licensed nutritionist. May also be mixed with your favorite juice or beverage. Refrigerate after opening.

L-carnitine 1800 stimulates growth hormone and helps turn on the mechanism that burns off fat in your problematic areas.

L-carnitine 1800 transfers long-chain fatty acids, such as triglycerides into mitochondria, where they may be oxidized to produce energy. Carnitine has also been shown to reduce fatigue and serve as an appetite suppressant as well.

Raspberry Ketones

What did scientists learn about fat cells?

Researchers observed that raspberry ketones decreased the amount of fat in the liver and visceral adipose (abdominal fat) tissues. It also significantly increased norepinephrine-induced lipolysis (the decomposition of fat).

Researchers also tested in vitro fat cells with raspberry ketones and found that they showed greater evidence of breakdown when compared to controls.

Garcinia Cambogia

According to some studies, Garcinia Cambogia can inhibit a fat producing enzyme called Citrate Lyase, making it more difficult for the body to produce fat from carbohydrates. It has also been shown to increase levels of the neurotransmitter serotonin. This could theoretically lead to reduced appetite and cravings.

Garcinia Cambogia may consistently lead to significant weight loss.
