Carotenoids contribute to
antioxidant activity in cellular
lipids, support normal cellular growth
and renewal, and assist healthy levels
of immune cell activity. Carotenoids
promote a healthy cardiovascular
system, including support for a healthy
antioxidant response paired to LDL
cholesterol. Dietary intake of the
carotenoids lutein and zeaxanthin have
been shown to support clear,
healthy vision.*

Flavonoids promote antioxidant activity,
cellular health, and normal tissue growth
and renewal throughout the body.*

Cruciferous compounds - sulforaphane
and indole-carbinol (from broccoli and
other crucifer extracts) and D-limonene
(from oranges) support enzyme activity
linked to normal cell growth and renewal,
especially of breast and prostate tissues.
Soy provides isoflavones (e.g. genistein),
that help maintain healthy hormonal activity.*
