

BARCODE

DIRECTIONS: Take one to two capsules daily, or as directed by your healthcare practitioner.

5-MTHF (5-methyltetrahydrofolate) is the most biologically active form of the water-soluble B vitamin, folic acid. It is the preferred form of folate supplementation due, primarily, to the poor absorption of folic acid when liver disease, genetic enzyme defects, or gastrointestinal conditions—especially those involving malabsorption—are present. Data suggest that supplementing with 5-MTHF increases plasma folate more effectively than folic acid. In this formula, 5-MTHF is provided as Quatrefolic®—the glucosamine salt of 5-MTHF. Quatrefolic is proven to have greater stability, solubility, and bioavailability over calcium salt forms of 5-MTHF.*
