Here's What Makes Kre-Alkalyn® EFX Creatine A Category Of One:

Why a protective pH of 12-14 is so important:

Kre-Alkalyn® EFX is the only **creatine monohydrate** product in the world with a pH above 12 because its molecules are synthesized with "buffering" agents using a patented manufacturing process. As a result, it passes **intact** to the bloodstream and reaches muscle cells at full strength.

Kre-Alkalyn® EFX's patents also cover all pH levels from 7-14. Therefore, the pH of all other creatine products must be pH 6.9 or less—meaning they will **all** lose potency in liquids.
