**Daily Value not established.

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

Amino Acids are the building blocks of protein, which play a role in normal growth and development.* **Glutamine** is the most abundant free form amino acid in blood and skeletal muscle. It can serve as an energy precursor and is involved in more metabolic processes than any other amino acid.* **Hard training** can decrease glutamine levels, which is why it's used by bodybuilders and athletes everywhere.
