

Resveratrol is a natural plant compound from the polyphenol family, found in grapes and grape juice, red wine, peanuts and the Japanese knotweed plant. Studied for its health benefits and relationship to cell lifespan and heart health, it is the compound believed to be responsible for the "French Paradox" (the theory that frequent red wine consumption may explain the low rate of heart disease among the French, who typically consume a high fat diet). Resveratrol given to other living organisms has resulted in an increase in their lifespan.¹

Our Resveratrol 150 mg provides a significant amount of trans-resveratrol, which may be a more bioavailable form of the compound. It also includes natural Red Wine Extracts from grapes, a source of several beneficial polyphenol compounds. *À votre santé!*
