Hardcore Testosterone Booster

The key ingredients in TEST HD™ have been shown to significantly increase testosterone levels.* TEST HD™ requires no cycling on and off, and is formulated with scientifically researched ingredients such as shilajit and boron. TEST HD™ also contains other well-known ingredients, including stinging nettle root, Tribulus, velvet bean and zinc.

• Boosts Free Testosterone in 7 Days

¹ TEST HD™ is formulated with a concentrated and powerful dose of boron that is shown in human clinical research to increase free testosterone and decrease estradiol in just 7 days. Free testosterone is the most active form of testosterone and is critical for initiating the musclebuilding process.[▲]

• Increases Total Testosterone

TEST HD™ is the first hardcore testosterone booster to include a clinical-strength dose of shilajit, a rare organo-mineral compound obtained from steep rocks of different formations found in the Himalayas and other high mountains.

² This powerful test-boosting compound is shown in a human clinical study to significantly increase total serum testosterone levels as documented after 90 days.[▲]
