

When our Acidophilus capsules are produced, they each contain a minimum of 100 million viable *Lactobacillus acidophilus* cells. An exclusive high vacuum freeze-dried process is used to generate the optimal number of live cells and improve stability. Over time cells will naturally diminish in count. However, our freeze-dried Acidophilus capsules offer better stability than liquid. To maintain live cell count and maximize effectiveness, refrigerate these capsules immediately after purchase and use by the Best By date.<sup>†</sup>
