Bone health can be dependent on many factors including heredity, diet, exercise and lifestyle. Calcium is the primary mineral responsible for strong bones.* The body also uses Calcium for proper muscle contraction and nerve function.* Because the body cannot produce Calcium, a balanced diet, regular exercise, healthy lifestyle choices and adequate intake of Calcium and Vitamin D can play a role in maintaining optimal bone health.* This product also contains Vitamin K and Magnesium, two nutrients that support bone health.*

**Adequate calcium as part of a healthful diet, along with physical activity, may reduce the risk of osteoporosis in later life.
