

Directions: Take one to two lozenges 15 to 60 minutes before bedtime, or as directed by your healthcare practitioner.

Melatonin releases from the pineal gland, reaching its peak at night to help maintain tissues in a youthful state of health. Secretion of melatonin declines significantly with age, as the pineal gland becomes calcified. This melatonin formulation is for those who need the fastest possible sleep-inducing action. By dissolving in the mouth, melatonin goes directly to the brain and bypasses the liver where much of orally ingested melatonin can be metabolized (in some people) before it reaches the brain. If you have a problem getting to sleep and staying asleep, take melatonin lozenges 15 minutes before bedtime to induce drowsiness.*

***These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.**

CAUTION: Consult your healthcare practitioner before use. Keep out of reach of children. If you have any autoimmune disease do not use melatonin.*

STORAGE: Keep tightly closed in a cool, dry place.

DOES NOT CONTAIN: Wheat, gluten, corn protein, yeast, soy, animal or dairy products, artificial colors, sweeteners, or preservatives.
