

EXPERIENCE THE INCREDIBLE POWER OF NO2 RED™

NO2 RED defies all limits and unleashes the most powerful NO2 formula. Six full phases of nitric oxide (NO) amplification fueled by Hemobolics - the channeling of growth-inducing nutrients to their DNA receptors. This helps trigger new growth and explosive muscle cell replication.^{1,2}

Advanced compounds ignite the genes that "turn on" protein synthesis - launching new muscle protein production. Simultaneously, the integrity of DNA itself is targeted through fortification of their telomeres.^{1,2}

Telomeres are DNA's protective "end caps." When cells duplicate, their DNA "splits" to form a copy. However, this also shortens the protective telomeres. Eventually, telomeres disintegrate - causing DNA to "fall apart" - resulting in a loss of vital genetic information necessary to code new cells.

DNA DEGRADATION NO2 RED PROTECTS DNA^{1,2}

The sequence on the left demonstrates the progressive weakening of cells as their DNA "degrades" during replication. Small bits of cellular "information" is forever lost with each new copy. After several generations, the DNA is no longer viable and cellular copies are rendered useless. The sequence on the right represents optimal cellular duplication with NO2 RED. Advanced compounds target and protect DNA strands. This helps maintain healthy cellular replication - keeping cells "informationally" intact and viable for longer. The end result - you create an optimal environment for efficient muscle growth and protect what you gain.^{1,2}
