Muscle spasms and cramps are spontaneous, often painful muscle contractions that can lead to hypertonicity. Hypertonicity can interfere with proper adjustments and palpations. Abnormal tonicity can result from interruption in the central nervous system (CNS), as well as from calcium, magnesium or potassium deficiency. Focusing on maintaining a healthy CNS and providing key nutrients can help restore normal tonicity and may help soft tissue heal faster.†

Neuro-Ease® provides a truly specialized formula that contains a blend of concentrated botanicals, vitamins and minerals targeted for nerve and muscle health.†

We Guarantee Our Supplements for Potency and Purity
