

Bromelain is an enzymatic protein derived from pineapples. As an enzyme, bromelain is described as proteolytic, meaning it digests other proteins. It is also described as a systemic enzyme, so it operates not just in the gastrointestinal tract but throughout the body in other systems.[†] Taking bromelain can aid in the digestion of protein rich foods. It can also support a healthy response to inflammation by countering circulating immune complexes that occur after bodily stress.[†] Finally, bromelain has fibrinolytic activity, meaning it can breakdown the protein fibrin. Although fibrin is essential for blood clotting, overproduction of fibrin can affect circulation and tissue health.[†]
