L-carnitine

chlorogenic
acid

L-CARNITINE is a naturally occurring amino acid which plays a vital role in the metabolism of fat. L-Carnitine works by potentially helping to convert fatty acids into fuel your body can use for energy, while at the same time promoting growth and development.

GREEN COFFEE EXTRACT (GCE) – These antioxidant compounds have been clinically studied to have several beneficial effects on weight loss. They help with inhibition of fatty acid synthase, increased fat oxidation and increased metabolism.†
