

FAKTRITION™ Keto Protein is a break through protein that contains two trademarked ingredients to help you manage your weight while dieting. It provides immediate and sustained energy and fuel for exercise and everyday life. The trademarks are goBHB™ and VELOSITOL™. Keto Protein also significantly increases muscle protein synthesis by 34%, after only 4 hours versus whey protein alone.

GoBHB™ is a ketone body, a breakthrough energy supplement. When eating a low carbohydrate diet, the liver converts fats to ketones. Ketones serve as an alternative energy source for the brain, heart and muscle. With goBHB™, you are ingesting a ready-to-use ketone. This type of technology gives athletes and busy professionals more energy, performance, and focus. Beta-Hydroxybutyrate (goBHB™) is a ketone body providing a direct energy source to the brain and muscles. One does not have to be in a ketogenic state to benefit from goBHB™. Even those with low carbohydrate diets can experience the benefits of higher energy and better performance from Keto Protein.

Is goBHB™ just for athletes? No, it's for anyone looking to manage their weight and wanting to feel more energetic throughout the day. For instance, busy professionals, on-the-go moms or dads, athletes, and college students looking for extra energy to help push them through the day, will all benefit from goBHB™.

Benefits of goBHB™:

- Carbohydrate-free fuel for muscle and brain*
- Reduces hunger*
- Improves cognition*
- Stimulates “metabolic shift” away from glucose dependence*
- Immediate and sustained energy fuel for exercise*
- Benefits of a ketogenic diet without the carb restriction*

Patented VELOSITOL™ significantly increases muscle protein synthesis (MPS) by 34% in a single dose when combined with whey protein versus one just consuming whey protein alone.

The Velositol™ amylopectin/chromium complex was shown to amplify the effects of protein by significantly increasing muscle protein synthesis. The results of the clinical study showed that the ingestion of a single dose of Velositol™ mixed with a dose of whey protein significantly increases muscle protein synthesis by 34%, after 4 hours versus whey protein alone. A primary benefit of protein is its ability to stimulate muscle protein synthesis, which affects the body's ability to build lean muscle and repair muscle damage due to exercise.

Not only is Velositol™ increasing muscle protein synthesis (MPS) with Keto Protein but it's lasting 4 hours in your body so it can also increase MPS with the foods you are eating around Keto Protein.

SUGGESTED USE: As a dietary supplement, take 1 rounded scoop with 6 oz of water or milk and stir, shake, or blend for 30 seconds - anytime you want a premium protein beverage.
