CraveCRUSH™

Block sweet taste receptors^x

Stop sugar cravings

Sugar Cravings

Sugar cravings start in the taste buds. When you bite into something sweet, the taste receptors on your tongue signal your brain, which automatically triggers cravings for more. The sugar in just one bite can activate sweet taste receptors for up to half an hour, triggering sugar cravings that last just as long. Blocking sweet taste receptors on the tongue can break this cycle.

How It Works

Crave Crush binds to sweet taste receptors, suppresses sweet taste, and helps reduce sugar cravings in seconds.^x

Crave Crush is patented and unlike any other product in the world.
