

Combines Probiotics with Colostrum for the Synergistic Support of Digestive Balance*

A cutting-edge, science based, combination of wholesome ingredients for digestive health support that represents the next generation in probiotic supplementation.

10 Billion Live Microencapsulated Cells Derived from 5 Clinically Studied Human Probiotic Strains*

2 Bifidobacterium strains for the large intestine.

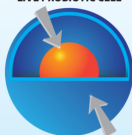

3 Lactobacillus strains for the small intestine.

Superior Stability and Delivery with MicroGuard™ Microencapsulation Technology

Every live cell has a protective coating which helps more live cells reach the intestine and grow better than uncoated probiotics.*

Our MicroGuard™ coated probiotic strains also have the added protection of a delayed release capsule which resists harsh stomach acid better than standard capsules.*

LIVE PROBIOTIC CELL

MICROGUARD™ COATING

What are Probiotics?

Probiotics are live microorganisms that are also known as "good" bacteria that help promote a healthy digestive tract and immune system.*

What is Colostrum?

Colostrum is the first milk produced by mammals (cows) after birth and is particularly rich in immunoglobulins, immune supporting peptides (lactoferrin & lactoperoxidase) and other bioactive molecules, including growth factors. Combined, the bioactive natural compounds found in colostrum help promote immune health and support normal gastrointestinal tract health.*

Symbiotics® a Trusted Name in Gut Health & Immune Support

Expanding the Symbiotics® brand to include a cutting edge probiotic line along with their market leading colostrum line is an important development for consumers looking to support their digestive health, particularly when considering the synergistic effect that probiotics and colostrum each provide for optimum gut health and immune support.

Synergy of Probiotics and Colostrum

- Helps Promote Digestive Balance*
- Supports Immune Health*
- Gluten Free
