As you mature, your production of hormones slows down, which can result in hot flashes, vaginal dryness, and night sweats. Soy isoflavones are a natural plant hormone (phytoestrogen) that help you to reduce the everyday discomfort of menopause, while also supporting your body against other effects of hormone loss. Studies have shown that soy isoflavones deliver a host of other benefits for women.*

Dietary Supplement

Soy Care[®] for Menopause

Why Twice a Day? Because isoflavone levels drop sharply after 8-12 hours, we formulated Soy Care to be taken like food: twice per day dosage maintains isoflavone levels to deliver maximum benefit day and night.
