Regular exercise and a healthful diet with adequate calcium are essential in achieving peak bone mass in teenagers and young adults and maintaining bone health during adulthood.

Vitamin D assists in the absorption of calcium. Individuals who do not store enough calcium throughout their lives have an increased risk for developing osteoporosis. While adequate calcium intake is important, daily intakes above 2000 mg are not likely to provide any additional benefit.

Suggested use: Take one tablet two to three times daily with a full glass of water, preferably after a meal.

Keep out of the reach of children.
Keep in a cool dry place, tightly closed.

No artificial colors have been added to this formula, the product may vary in color.

Calcium with Vitamin D Tablets USP.
