Flavonoids promote antioxidant activity, cellular health, and normal tissue growth and renewal throughout the body.*

Carotenoids compounds - xanthophylls and noble carotenoid (from lutein and other carotenoid) and lutein (from orange support enzyme activity linked to normal cell growth and renewal, especially of breast and prostate tissues. They provide lutein (e.g., peroxide), that help maintain healthy hormonal activity.*

Carotenoids contribute to antioxidant activity in cellular lipids, support normal cellular growth and renewal, and assist healthy levels of immune cell activity. Carotenoids promote a healthy cardiovascular system, including support for a healthy antioxidant response (linked to LDL cholesterol). Dietary intake of the carotenoids lutein and zeaxanthin have been shown to support clear, healthy vision.*
