What is Cholesterol?

Cholesterol is a waxy, fat-like substance needed for certain body functions.

- **Did you know?** The liver produces up to 75% of the body's cholesterol. Food in the daily diet is another source of cholesterol.

Healthy Cholesterol Levels

Total cholesterol levels in the blood should be less than 200 mg/dL. The two primary types of cholesterol are:

- 1) **HDL cholesterol**, which is "good" because it helps remove cholesterol from the blood. Levels above 40 mg/dL are healthy.
- 2) **LDL cholesterol**, which is "bad". Levels below 100 mg/dL are optimal for cardiovascular health.
